

# 59-4650-10TB

## Wiring Harness for InSight II Scanners

### Description

To provide an easy method of wiring the InSight II scanners in a "multi-drop" configuration for remote PC communications, Fireye offers the 59-4650-10TB Wiring Harness.

The Wiring Harness is comprised of a junction box with two ten-foot cables, (one 59-546 (eight-conductor) and one 59-547 (twelve-conductor)), with female quick disconnects for mating with the InSight II scanner. The two cables are factory-wired to terminal blocks inside the junction box. The junction box has four 3/4" threaded openings for the entry of incoming cabling from the burner management system and to the adjacent scanners.

See bulletin CU-113 for detailed scanner wiring connections.
