60-3005 RJ45 MODBUS SPLITTER FOR BURNERPRO

DESCRIPTION

NOTE: This bulletin only covers the 60-3005 RJ45 Modbus splitter for BurnerPRO. See bulletin BP-1003 for further information.

This splitter is used to connect multiple BurnerPRO controls to a single Modbus master in a point-to-point configuration. The splitter has one RJ45 male on a 10" long cable, connected to an enclosure with two RJ45 female receptacles. Wire between splitters using Fireye part ED580-2, -4 or   -8, or any straight-wired Ethernet cable. The splitter is then designed to fit inside most standard wire management duct.

The RJ45 splitter is wired straight through on all eight pins. Note that this splitter is not intended to be used as an Ethernet switch.
